## Case Talk\_NFT

The image shows a login interface for 'MEDIT Link NFT Wallet Service'. The header is blue with the text 'MEDIT Link' in white, and 'NFT Wallet Service' in a smaller font below it. The main content area is white and contains a 'Log In' section. This section has two input fields: 'ID (Email address)' with a placeholder 'Enter ID (Email address)', and 'Password' with a placeholder 'Enter password'. To the right of the password field is a link 'Forgot your password?'. Below the input fields is a blue 'Log In' button. At the bottom of the white area, there is a link 'Don't have an account? Create account'.

### What exactly is NFT?

NFTs are digital assets with blockchain-based ownership (a digital ledger).

This means that no one can change the ownership of an NFT on the blockchain or produce the same NFT.

As a result, NFTs can be used to represent people's identities, property rights, and more.

### What is the purpose of an NFT wallet?

The wallet serves as a portal to the blockchain, which is where your assets are stored.

It achieves it by giving users "private keys," which are cryptographic credentials that allow them to transact on the blockchain. Because wallet accounts are given by a different platform than Medit Link, Medit Link users must additionally register for their accounts.

### What makes Medit Link's NFT service unique?

Medit Link NFT is a dental-only NFT that seeks to provide safer data management than Case Talk's current data sharing methods. The original NFT data can only be viewed in Case Talk, a specific viewer, and can only be accessed with the security code.

### Is it possible for me to do a transaction with my NFT?

The NFT tokenization service is currently only available for personal storage.

For marketplace registration or person-to-person transactions, there is no NFT transfer service.

If services become available in the future, you will be alerted.

# Easy Communication

## Case Talk\_NFT

### What makes Medit Link's NFT Wallet service unique?

Users do not need to maintain or manage a private key when creating an NFT wallet because of the Custodial Wallet (centralized wallet) structure, and they can retrieve their login password if they forget it. It's a web platform, not a type of hardware installation, and it may be utilized anywhere there's an online connection.

### Where are my NFTs stored?

Ownership records are registered on the "Klaytn" blockchain, and Medit Link NFT is held in customer accounts within the Medit Link NFT Wallet Platform.

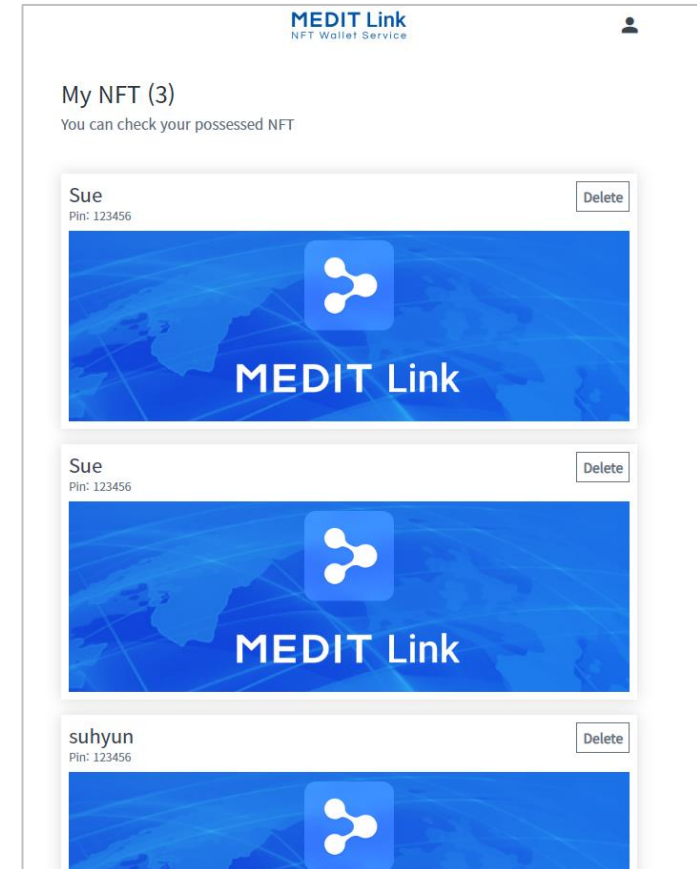

Case Talk's original data is safely saved on Medit Link and can only be accessed via security measures. Only a small amount of vital data is stored on the blockchain, which prevents access to information such as data owners and the original data.

### Is it possible for me to do a transaction with my NFT?

The NFT tokenization service is currently only available for personal storage.

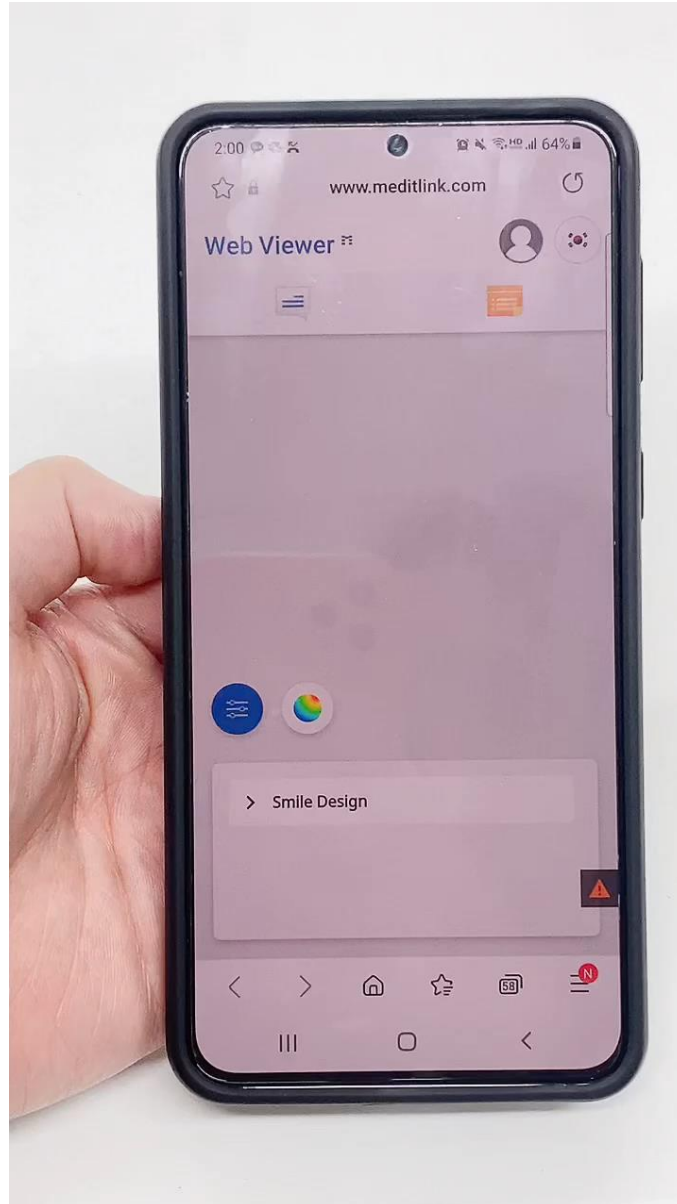

For marketplace registration or person-to-person transactions, there is no NFT transfer service.

If services become available in the future, you will be alerted.
